Mobile : +1-256-417-9343
Address: Gainesville, FL, USA

Education

- **University of Florida** — Gainesville, FL
  Doctor of Philosophy (Ph.D.) in Electrical and Computer Engineering — *Jan 2021 - Dec 2025 (Expected)*
  Advisor: Prof. Mark Tehranipoor — *CGPA: **3.95/4.00***

- **The University of Alabama in Huntsville** — Huntsville, AL
  Master of Science (M.Sc.) in Computer Engineering — *Aug 2019 - Dec 2020*
  Advisor: Prof. M. Tauhidur Rahman — *CGPA: **3.71/4.00***

- **Bangladesh University of Engineering and Technology (BUET)** — Dhaka, Bangladesh
  Bachelor of Science (B.Sc.) in Electrical and Electronic Engineering — *Jul 2014 - Oct 2018*
  *CGPA: **3.51/4.00***

Experience

- **Florida Institute for Cybersecurity (FICS) Research, University of Florida** — Gainesville, FL
  Graduate Research Assistant — *Jan 2021 - Current*
  - Developing a GNN-based power and EM side-channel leakage modeling framework at the pre-silicon stage, enhancing the security of cryptographic designs against physical attacks.
  - Designing an EM-based side-channel disassembler to reconstruct executed instructions in microcontrollers, contributing to secure embedded systems analysis.
  - Developed a novel PMU-based approach for detecting cpu workloads and mitigating cache side-channel vulnerabilities to counter speculative execution attacks.
  - Implemented an automated CAD toolflow to evaluate physical-design aware EM side-channel vulnerability at gate-level, enabling fast security sign-off at pre-silicon.
  - Developed a python-based framework to estimate the IP and SoC-level resiliency against power side-channel threats at RTL as part of a DARPA-funded project in collaboration with Synopsys.

- **Synopsys Inc.** — Sunnyvale, CA
  Graduate Technical Intern (Security IP Team), Solutions Group — *May 2023 - Dec 2023*
  - Developed embedded applications for secure boot, TLS communication, and cryptographic services as part of DARPA-funded AISS (Automatic Implementation of Secure Silicon) project.
  - Implemented ASCON lightweight cryptographic application for embedded firmware encryption and authentication as part of secure boot protocol.
  - Integrated ASCON authenticated encryption and hashing hardware module to the Synopsys security engine subsystem and implemented a masking scheme for side-channel resiliency.

- **Department of ECE, University of Florida** — Gainesville, FL
  Graduate Teaching Assistant - Intro to Hardware Security and Trust — *Aug 2022 - Dec 2022*
  - Managed the assignments, projects, and exams and developed tutorials on commercial EDA tools for VLSI design, synthesis, functional and security verification.

- **Department of ECE, The University of Alabama in Huntsville** — Huntsville, AL
  Graduate Research Assistant — *Aug 2019 - Dec 2020*
  - Developed open-source API-based C++ scripts to interface commercial DDR3 DRAM chips deployed on a Xilinx ML605 FPGA board to execute read/write operations with configurable timing parameters.
  - Performed device aging under stress conditions for DRAM modules and analyzed bit-flips due to retention error to explore reliability issues, security vulnerabilities and generate robust signatures.

- **Department of ECE, The University of Alabama in Huntsville** — Huntsville, AL
  Graduate Teaching Assistant - Computer Organization, Intro to Computer Architecture — *Aug 2020 - Dec 2020*
  - Assisted 100+ graduate/undergraduate students with grading homework, quizzes, projects, and exams on concepts of computer organization, architecture, memory hierarchy, assembly language, and MIPS ISA.

Technical Skills

- **Programming Languages**: Python, C/C++, Rust, Verilog, VHDL, SystemVerilog, Assembly (RISC-V/MIPS)
- **Electronic Design Automation Tools**: Synopsys Design Compiler, VCS, Verdi, Xilinx Vivado, Modelsim, Cadence Innovus, PrimeTime, JasperGold
- **Scripting**: Tcl/Tk, Unix Shell, Bash, Make, CMake, Perl
- **Data Analysis & Machine Learning**: Scikit-learn, Tensorflow, Keras, PyTorch
- **Other Software and Tools**: Linux, Git, PAPI, gem5, multi2sim, Perforce, Latex, Minitab

Publications

- **MK Bepary**, T Zhang, J Zhou, F Rahman, F Farahmandi, M Tehranipoor , "Towards Efficient Gate-Level Electromagnetic Side-Channel Leakage Modeling and Vulnerability Assessment," Journal of Hardware and Systems Security, 2024. (Under Review)

Poster Presentations

- Presented a poster titled *"Quantitative Assessment of Power Side-channel Vulnerability at Pre-silicon Stages"* on *2023 Florida Semiconductor Week, Gainesville, FL.* (Jan 2023) (link)
- Presented a poster titled *"Electromagnetic Side-Channel Leakage Modeling and Security Assessment at Pre-Silicon Stages"* on *2022 Trusted and Assurance Microelectronics (TAME) Forum, Columbus, OH.* (Sep 2022) (link)

Relevant Coursework

- **Computer Engineering**: Computer Architecture, System-on-Chip Design, Reconfigurable Computing, VLSI HDL/ Modeling, Advanced Computer Architecture, Parallel Programming, Advanced VLSI
- **Hardware Security**: Hardware Security and Trust, CAD for Hardware Security Verification, Advanced Hardware Security, Cybersecurity Engineering
- **Machine Learning**: Data Mining, Intro to Machine Learning, Probability and Statistics, Linear Algebra

Selected Academic Projects

- **System-on-Chip (SoC) Design**: Implemented a SoC hardware design using MicroBlaze processor, peripheral IP integration (AXI, APB), bus protocol (APB), and developed baremetal C applications. (2023)
- **Convolution and DRAM DMA on FPGA**: Developed a custom hardware implementaiton of 1-D Time-Domain Convolution operation and DRAM DMA inteface on Zedboard to improve performance using parallelism.(2024)
- **Implementation of FPGA Pong Game**: Implemented the hardware design of the VGA controller for monitor and Pong Game controller on a Xilinx FPGA using MicroBlaze processor and I/O peripherals. (2023)
- **Property-based security verification of an RSA controller**: Implemented security properties with SystemVerilog assertions to verify an RSA controller design on Cadence Jasper. (2021)
- **Deep-learning based hand-written character recognition**: Developed a deep convolutional neural network pipeline along with data pre-processing and augmentation techniques using python keras and scikit-learn libraries to classify images of hand-written characters with 98.07% accuracy. (2022) (github)
- **Performance analysis of cache replacement policies**: Implemented different cache replacement policies (LRU, pseudo-LRU, FIFO, random, MRU, LFU, etc.) on x86 architecture using Gem-5 simulator to analyze the performance improvement on benchmark programs. (2020)

Honors and Awards

- 1st Place in 2022 IEEE HOST Microelectronics Security Challenge (github), 2022 IEEE HOST Travel Grant, Undergrad Dean's List (2015), Education Board Merit Scholarship (Secondary and Higher Secondary).
